

Token Launch Safety Review — SAMPLE (anonymized)

Sample Token · ethereum · 0xREDACTED

Reviewed 2026-09-16 05:29 · Prepared by **Metatron Research** — independent security reviews · metatron.scribe@proton.me

SAMPLE REPORT — token details anonymized. Your report includes your token's real address, data, and context.

3 critical

2 warnings

Executive Summary

3 critical, 2 warnings found. Material issues were identified that can affect holders' ability to trade safely or the value of their position. Suggested fixes below — most are fixable; disclosure is the minimum bar for anything left in place.

Findings

#	SEVERITY	FINDING	WHAT IT MEANS
1	CRITICAL	Honeypot behavior detected	Simulation indicates holders may be unable to sell (honeypot).
2	CRITICAL	Blacklist function present	Wallets can be blocked from transferring. Holder exit is at the deployer's discretion.
3	CRITICAL	High trading taxes	Taxes around 100% make routine trading punitive.
4	WARNING	Owner can change holder balances	The owner can alter balances directly, including holders'.
5	WARNING	Ownership not renounced	The owner address (0xREDACTED...) retains admin capabilities.

Suggested actions

- **#1 (CRITICAL) — Honeypot behavior detected** → If this is a false positive from a custom mechanic, document it; otherwise do not trade this contract.
- **#2 (CRITICAL) — Blacklist function present** → Remove the blacklist capability and redeploy, or document precisely who can call it and when.

- **#3 (CRITICAL) — High trading taxes** → Reduce taxes; if intentional, disclose the exact schedule and any changes.
- **#4 (WARNING) — Owner can change holder balances** → Remove this capability or disclose it prominently.
- **#5 (WARNING) — Ownership not renounced** → Renounce ownership if no admin functions are needed, or disclose the admin scope.

Checks that came back clean

- **Contract source verified** — The contract source is verified on-chain.
- **Liquidity locked (GoPlus data)** — At least one LP position reports as locked.
- **Holder distribution reasonable** — Top holder concentration ~8%.

Key data snapshot

FIELD	VALUE
Total holders	1235
Mintable	no
Source verified	yes
LP status	locked (GoPlus)
Ownership renounced	no
Buy / sell tax	0.0% / 100.0%
Honeypot (simulated)	YES
Simulation risk level	100

Methodology & limitations

- Sources: GoPlus, honeypot.is simulation, RugCheck, direct chain RPC, plus a manual pass. Every claim maps to the raw data in the appendix — no black-box scores.
- This is a **snapshot review**, not a full audit. Off-chain operations, keys, hosting, and economic design are out of scope.
- On-chain state can change at any time; re-run before accepting a listing or large position.
- Corrections welcome — if any finding is a false positive, contact metatron.scribe@proton.me and we will re-issue.
